PROFILE SUMMARY

Junior AI Engineer experienced in building end-to-end Agentic AI applications using Python, FastAPI, RAG, LLMs, and vector databases. Developed a production-ready AI Wealth Intelligence Platform with portfolio analytics, recommendation engines, and LLM-powered insights. Passionate about scalable, explainable AI systems using modern GenAI frameworks.

TECHNICAL SKILLS

- **Programming** : Python (Pandas, NumPy, Scikit-learn, TensorFlow), SQL
- **Backend** : FastAPI, REST APIs, Pydantic
- **Generative AI** : LLMs, LangChain, CrewAI, Ollama, AWS Bedrock, Prompt Engineering
- **RAG** : ChromaDB, FAISS, Embeddings, Semantic Search, Chunking, Vector Retrieval
- **Agentic AI**: Tool Calling, Tool Selection, AI Agents, Context Aggregation, Recommendation Engine, Workflow Orchestration
- **Machine Learning** : Supervised & Unsupervised Learning, BERT, Transformer, RoBERTa
- **Data Analysis** : Power BI, Excel (Advanced), BigQuery
- **Cloud & Tools**: AWS (Lambda, S3, IAM), Docker, Git, BigQuery

EXPERIENCE

Vaali Infotech | Data Science Intern

India | Apr 2025-May 2025

- Built a news-domain conversational AI application using LangChain and LLMs, enabling grounded Q&A over curated news content.
- Designed an end-to-end Retrieval-Augmented Generation (RAG) pipeline including document ingestion, chunking, embeddings, and vector database retrieval for context-aware responses. Engineered a scalable data pipeline using BeautifulSoup and API integration for large-scale data collection, cleaning, and curation.
- Fine-tuned a Hugging Face BERT-base model for political bias detection, supporting automated classification and content analysis.

Noodle.ai | Data Science Intern

Bengaluru, India | Jul 2018-Nov 2018

- Developed a Sales AI application for accurate time series forecasting using Python, machine learning, and statistical modelling—enabling rapid, on-demand analysis.
- Built modular EDA libraries in Jupyter Notebook, incorporating summary statistics, periodicity detection, and time series classification for identifying patterns and seasonality.

EDUCATION

Bachelor of Engineering | GSKSJTI(VTU)

Bengaluru, India|2013-2017

- Grade Point Average (GPA): 7.1 |. Department: Computer Science

GENERATIVE AI & DATA PROJECTS

1) AI Wealth Intelligence Platform | 2026

- Developed an end-to-end AI-powered investment intelligence platform using FastAPI, Python, Ollama (Llama 3), ChromaDB, SQLite, and RAG, featuring portfolio analytics, REST APIs, and scalable architecture.
- Built portfolio analytics and recommendation engines to assess risk, diversification, sector exposure, and generate explainable investment actions (Keep, Watch, Review, Reduce, Opportunities).
- Implemented Agentic AI with dynamic tool selection, context aggregation, and vector search (ChromaDB) to deliver context-aware portfolio insights and conversational intelligence.

2)AI-Powered Blog Generation System (AWS) | Sep 2025

- Problem: Automate scalable long-form content generation using foundation models.
- Approach: Built serverless architecture with AWS Lambda, S3, and Bedrock for on-demand inference.
- Outcome: Enabled secure, automated blog generation pipeline with IAM-based access control.

3) AI Data Analyst | Oct 2025

- Problem: Reduce manual effort in exploratory data analysis and reporting.
- Approach: Designed a Crew AI-based multi-agent system for data loading, cleaning, analysis, and summarization.
- Outcome: Automated insight generation workflow from raw CSV datasets.

CERTIFICATION

Udemy - Generative AI (2025) | Google Data Analytics (2025)

INSOFE | Post Graduate Program in Data Science |Bengaluru, India |Sep 2017-Apr 2018
